CSI Construction Accident Information Report

Fatality Rate from Fall
Accidents in Industrial Settings **51.8%**

Tower Climbing

Ladder Use

Manhole
Entry Work

Telecommunication
Tower Maintenance

Utility Pole
Maintenance

Fall-related accidents in industrial workplaces have remained consistently high. Since working at heights carries inherent risks, the implementation of preventive measures is essential.

Regulations

01

Amendment to Article 24 of the Occupational Safety and Health Rules (June 28, 2024)

If the height of a fixed ladder-type passageway is 7 meters or higher, a backrest rail must be installed starting from 2.5 meters above the floor. If installation is impractical, **a personal fall protection system conforming to Korean Industrial Standards must be used. Additionally, workers are required to wear safety harnesses**

02

OHSA Mandatory Certification System (International)

Since November 19, 2018, it has been mandatory to install fall protection devices on existing fixed ladders 24 feet (7.3 meters) or higher if they do not already have fall protection devices in place. Newly installed or replacement fixed ladders exceeding 24 feet must include personal fall protection systems. **By November 18, 2036, all ladders exceeding 24 feet must have either safety systems or vertical fall protection systems installed.**

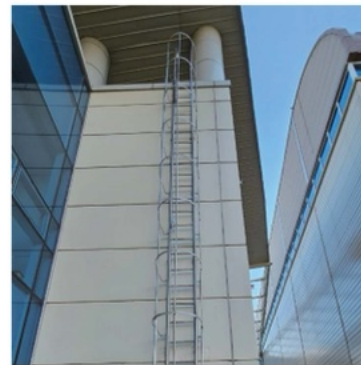

As-is

Unsafe Ascending and Descending Due to **Absence** of Fall Protection Systems

Safe Ascending and Descending
Following **Installation** of
Fall Protection Systems

To-be

Issues with Existing Fall Protection Barriers

Use of non-certified products (without KCs certification)
or unauthorized modified products

Intermediate **obstacles** require **frequent detachment and reattachment** of fall protection barriers, increasing fall risk

Improvements to Fall Protection Barriers

 KCs certification
(protective equipment safety certification) No. 2024-CY-0018

Intermediate Obstacle-Passing Fall Prevention Barrier (Innovative Product)
Ministry of Trade, Industry and Energy No. 24-298

Fall Prevention System

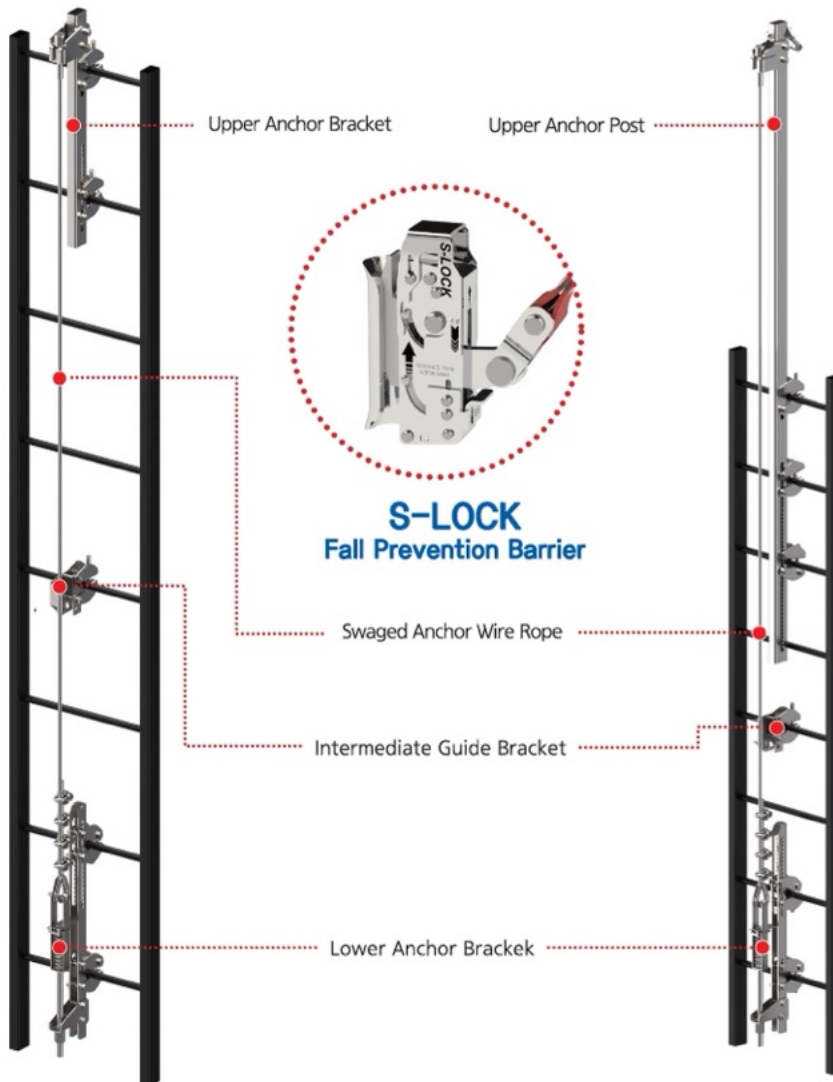

Fast and Safe Installation ✓

Lightweight Design ✓

Simplified Components ✓

Basic Type

Post Type

1 Upper Anchor Post

- Easy and simple wire rope fixation without separate fastening work
- Single anchor point for safety hooks
- All clamps secured with hinge bolts for quick fastening

2 Upper Anchor Bracket

- Simple installation of swaged anchor wire rope
- Compatible with ladders of any step shape or height

3 Lower Anchor Bracket

- Equipped with a tension adjuster for easy adjustment
- Min/Max markings allow intuitive load verification

4 Intermediate Guide Bracket

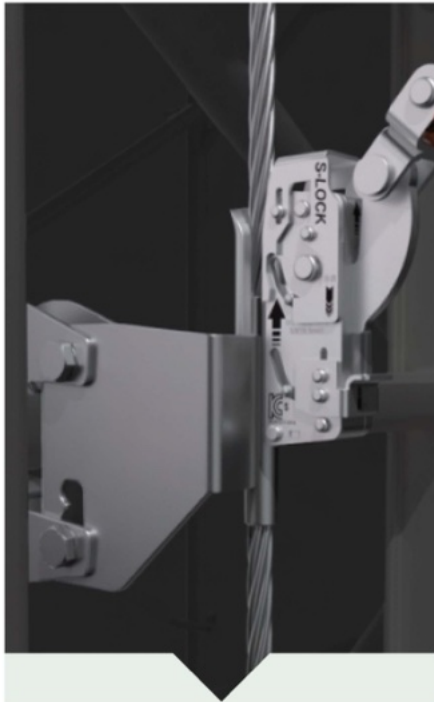

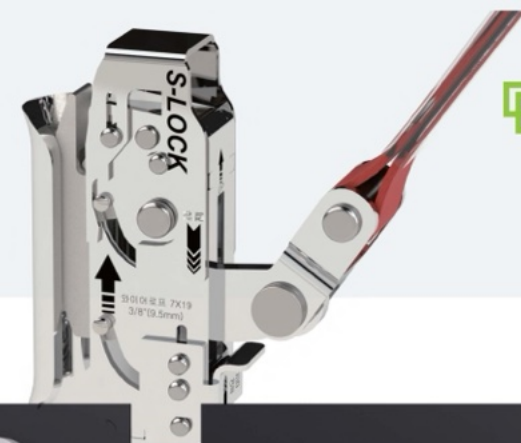

- Enables passage without manual operation
- Installed every 5 meters to prevent wire swinging and support smooth movement of the fall prevention barrier

5 Swaged Anchor Wire Rope

- Swaged stainless steel wire rope with a strong and easy-to-use installation design (7x19 AISI316 ϕ 9.53mm)

S-LOCK Features

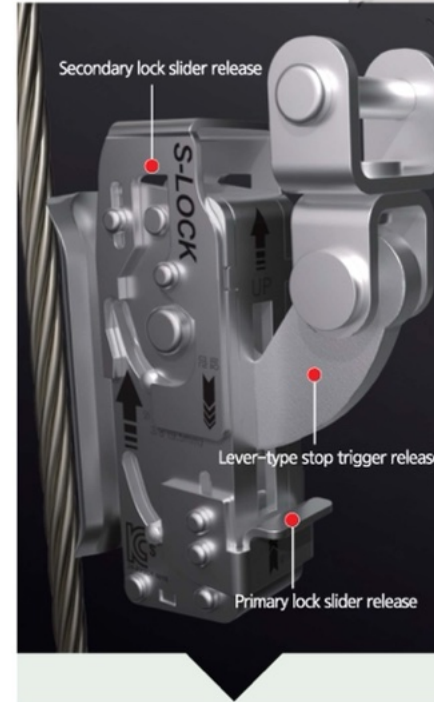

Intermediate Guide-Passing Type

Allows seamless passage through intermediate guides without detaching the fall prevention barrier

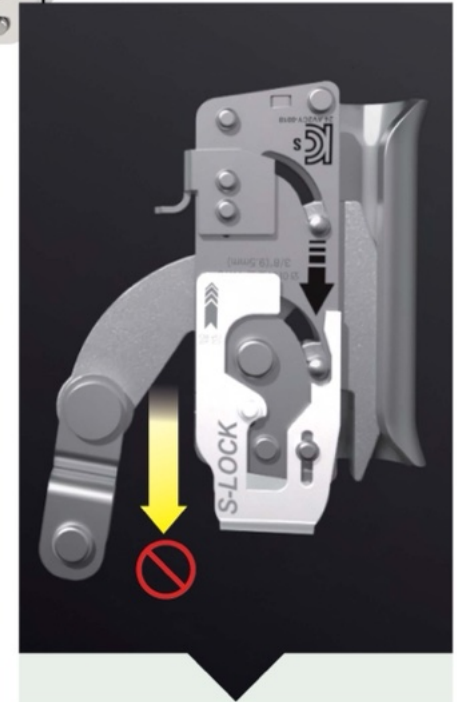

Plain-Patterned Braking Contact

Provides enhanced stability with a smooth-patterned braking surface, unlike the serrated contact used in other brands

Triple Locking Structure

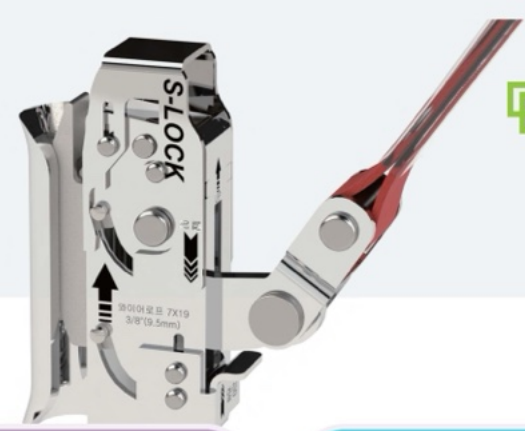

Designed with multiple locking devices to prevent malfunction or accidental disengagement

Anti-Reverse Locking Structure

Designed for forward-only installation, effectively preventing reverse locking or disengagement
